

## Piston Packing

for

## Type PC Controllers

Sample of Pistor

PROPER inspection and maintenance of the piston packing on PC controllers and other apparatus having air-operated mechanisms is necessary for the successful operation of these devices. Not only are these leather packing cups or washers made of the finest selected leather but great care is taken in their treatment and manufacture. Inferior washers should not be substituted.

As is well known, the production of a satisfactory piston packing is a very difficult manufacturing problem. In the production of G-E packings, the first step is to treat the plain leather washers. This is done by immersing them in a pan of liquid grease which is placed in an electric oven where a definite temperature is maintained for four hours. At the end of this time the washers are removed from the oven and divided into groups of three, care being taken to see that the thickness of each group is the same. The groups of washers are placed in molds which compress them and give them a cup shaped effect. The molds

are then placed in another oven for four hours where a definite temperature is maintained. After this drying out process the washers are removed from the molds and placed in forms where they are cut and trimmed to shape. In this way washers are made which insure satisfactory service and maintain the high standard of the apparatus itself.

It will be noted that after the first treating process, the washers are kept in groups of three, inasmuch as the completed packing consists of three individual washers. These groups should not be divided subsequently, and attempts made to make other complete packings from individual washers of different groups.

It is comparatively easy to replace these washers when necessary. The main cylinder head should be removed and the cam shaft revolved until the piston head is near enough to the outer end of the cylinder to be accessible. The cotter pin, nut, washer, follower, expansion spring and leather packing cups may then be removed in the order named.

General Electric Company, Schenectady, N. Y.
